

# iDye Jeans From Old to New!

Dyeing has never been easier than with the iDye washing machine method! The inner dye packet dissolves in water, so there aren't any messy powders to handle. iDye is for all natural fabrics. For fabric blends, combine similar color of iDye Poly and iDye for Natural. iDye Poly and dark/bright iDye natural colors require the stove top method.

1) Put your old blue jeans in the washer with the dissolvable iDye packet and set for the hottest wash cycle.

2) Start wash cycle. In a separate container, dissolve one cup of salt in hot water. Add the salt solution to wash once the jeans are submerged in water.\*

3) When the cycle is complete, simply dry the jeans and they're ready to wear! For increased washability, run a second cycle with the iDye Fixative.

**Note:** For front loading machines with a pre-wash flush, add dye between the flush and wash cycles.

**\*Tip:** You may want to pre-dissolve the dye packet in the same manner and add it to the washer at this point, with the salt, rather than first thing. This may yield more even dyeing in some cases (especially with front-loading washers).
